Ultra-compact, ultra-powerful: the D-LITE 1000 system from DYNACORD

The D-LITE 1000 convinces with a combination of exemplarily high SPL and minimal size and weight, making it the new standard in the ultra-compact class

Straubing, January 2008 The compact DYNACORD D-LITE 1000 system is a convincing solution for virtually all mobile audio system users, whether entertainers, mobile disk jockeys, or small- to medium-sized bands. With its compact dimensions and a total weight of less than 45 kilograms, the D-LITE 1000 fits comfortably into the boot of a small car. Once set up, however, the system turns into a performance giant. Designed for uncompromising audio performance, the D-LITE 1000 satisfies all the requirements of a mobile rig while delivering typical DYNACORD quality.

The system, comprised of two DYNACORD D 8 satellites and the new active PowerSub 312, brings an unprecedented combination of high SPL, long throw, and broad, even coverage to the ultra-compact class. The system achieves brilliantly clear reproduction with extremely low distortion, offering a very high level of intelligibility for even the most challenging acoustic environments. Exceptionally powerful bass reproduction all the way down to 43 Hz is a giant plus for mobile DJ applications.

The PowerSub 312's integrated lightweight 800W + 2 x 250W digital power amplifier is perfectly attuned to the system in every respect; it even allows the connection of additional units, such as two D8 satellites and a passive Sub 112 as a bass extension. Sophisticated protective circuitry including voice coil protection, DC/HF protection, audio limiters, back EMF protection, and thermal protection, guarantees optimal operating security. All of this adds up to a package that makes the DYNACORD D-LITE 100 an attractive alternative for mobile applications as well as fixed installation.
